AI Note 001

Choosing the Right AI
Chat Tool (Based on
Their Personality)

Time to read:
2 minutes

This document is for you if:
You don't know which AI model you should use

Your superpower after reading this:
Know which LLM (AI chat tool) to chat with

Did you know that AI has “personalities”?

The very basic knowledge like this can help you in the future.

AI chat tools - Large Language Models (LLMs) - are what made the word “AI” famous, and they’re what most people mean when they talk about “AI” today. An LLM is **a type of language model trained using self-supervised machine learning on a massive amount of text**. It’s designed to handle natural language tasks such as **text generation, summarization, translation, and even code generation**.

Self-supervised means the model learns patterns from the data itself, but also improves over time by incorporating human feedback. Because LLMs rely on huge volumes of training data, the type and quality of that data - along with how feedback is given - deeply influence how the model responds. As the saying goes: **“Garbage in, garbage out.”** The better the data, the better the output.

For example, if a model is trained on data filled with pessimistic worldviews, it will likely adopt a pessimistic tone. I often say LLMs are like interns: their “brains” can be filled with optimism or cynicism depending on what we feed them. In this sense, each LLM reflects how its creators view the world, or how they want the world to be seen.

That’s why different LLMs have different characteristics (I like calling them “personalities”), and each may serve different use cases better than others.

Let’s explore how these models differ, so you can find the one that best fits your needs!

KNOWLEDGE TO ACTION

AI Chat Tool Characteristics At A Glance

Aren't they the same?

ChatGPT

Characteristics (GPT-4o)

Friendly, adaptable, polished, agreeable

Best For:

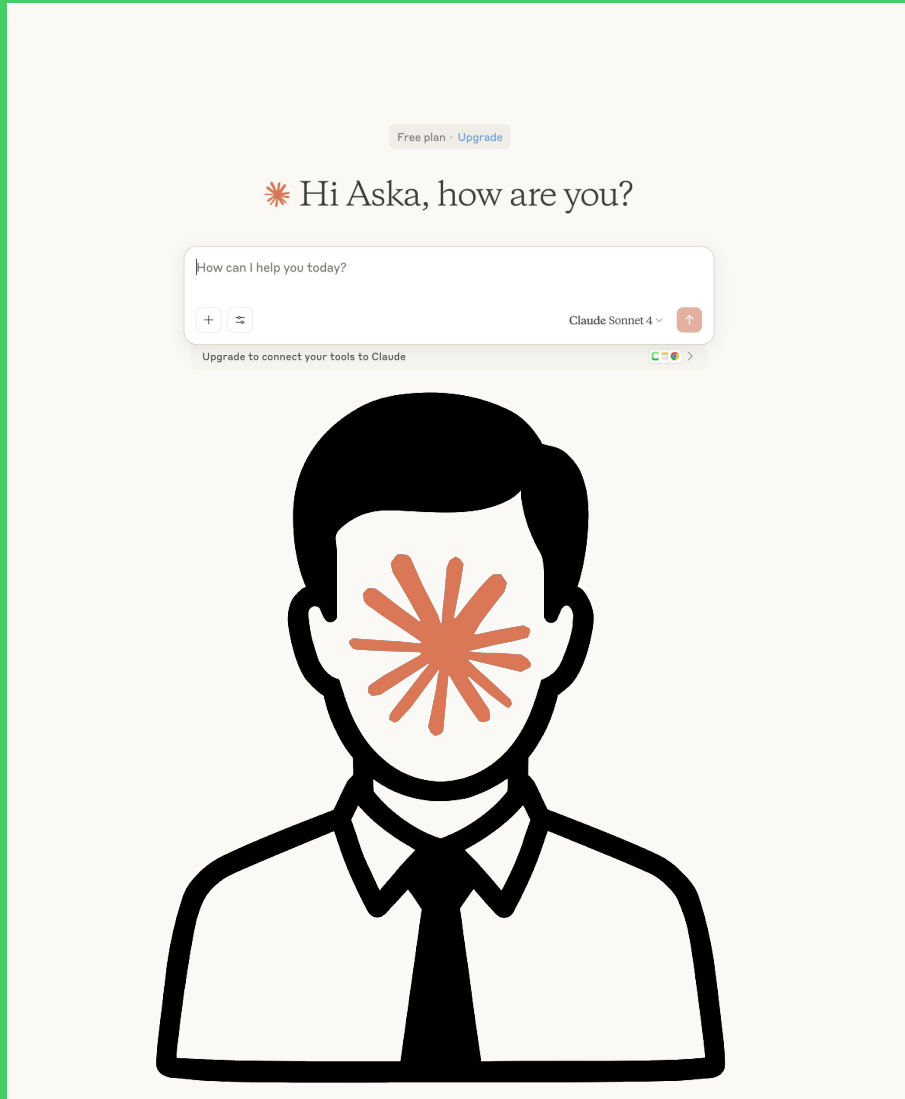

General writing, idea generation, brainstorming, deepsearch (paid)

Not Recommended For:

Social media post creation (too obvious if copied & pasted), latest information gathering

GetItDoneWith.AI Describes ChatGPT As:

A faithful allrounder who will never forget to flatter you - use it wisely, but always with a pinch of salt

Characteristics (Sonnet 4)

Thoughtful, ethical, highly safety-aware, polite

Best For:

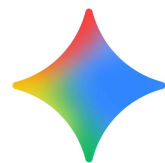

Formal writing, creative coding

Not Recommended For:

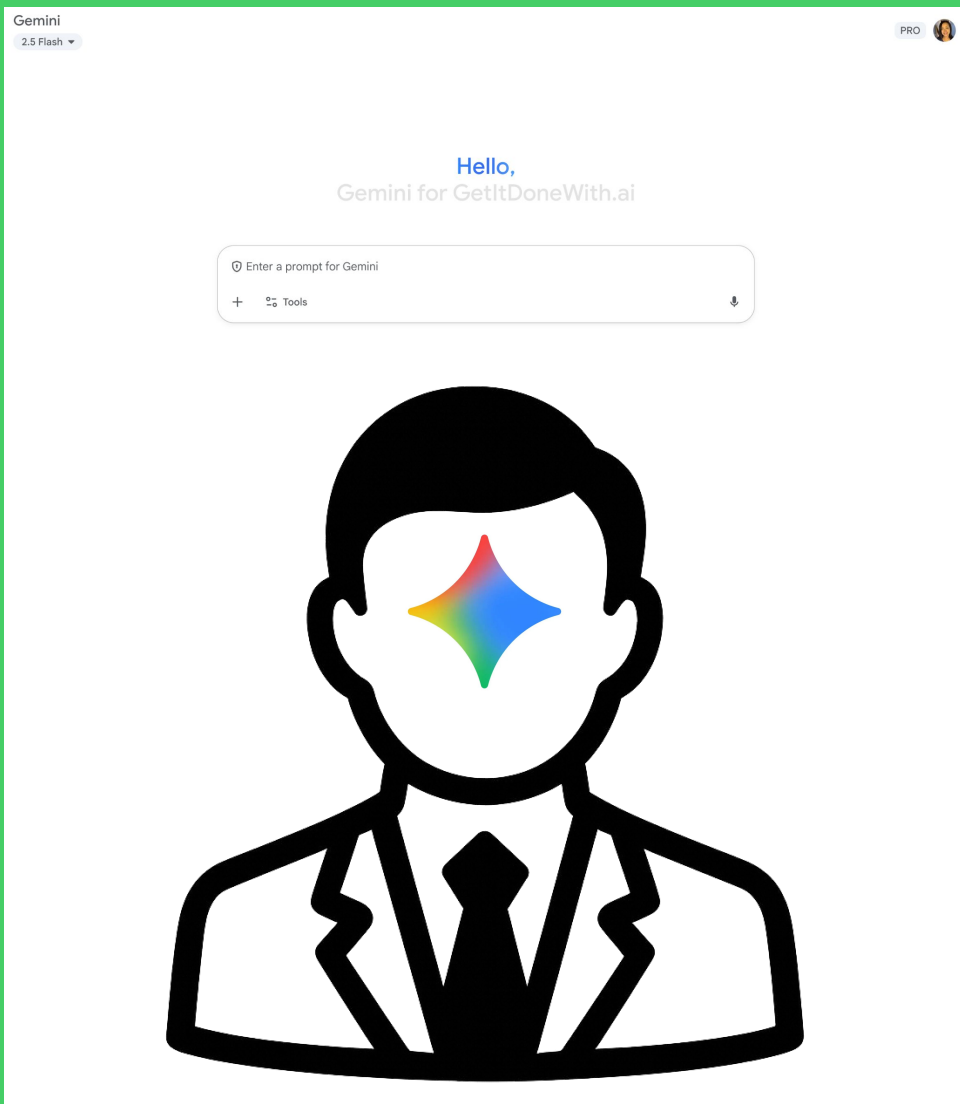

Real-time data access, image generation, chat about adult contents or unethical topics

GetItDoneWith.AI Describes Claude (Sonnet 4) As:

A polite partner with high(er) moral standard than other models

Gemini

Characteristics (2.5 Flash)

Objective, structured, research-oriented

Best For:

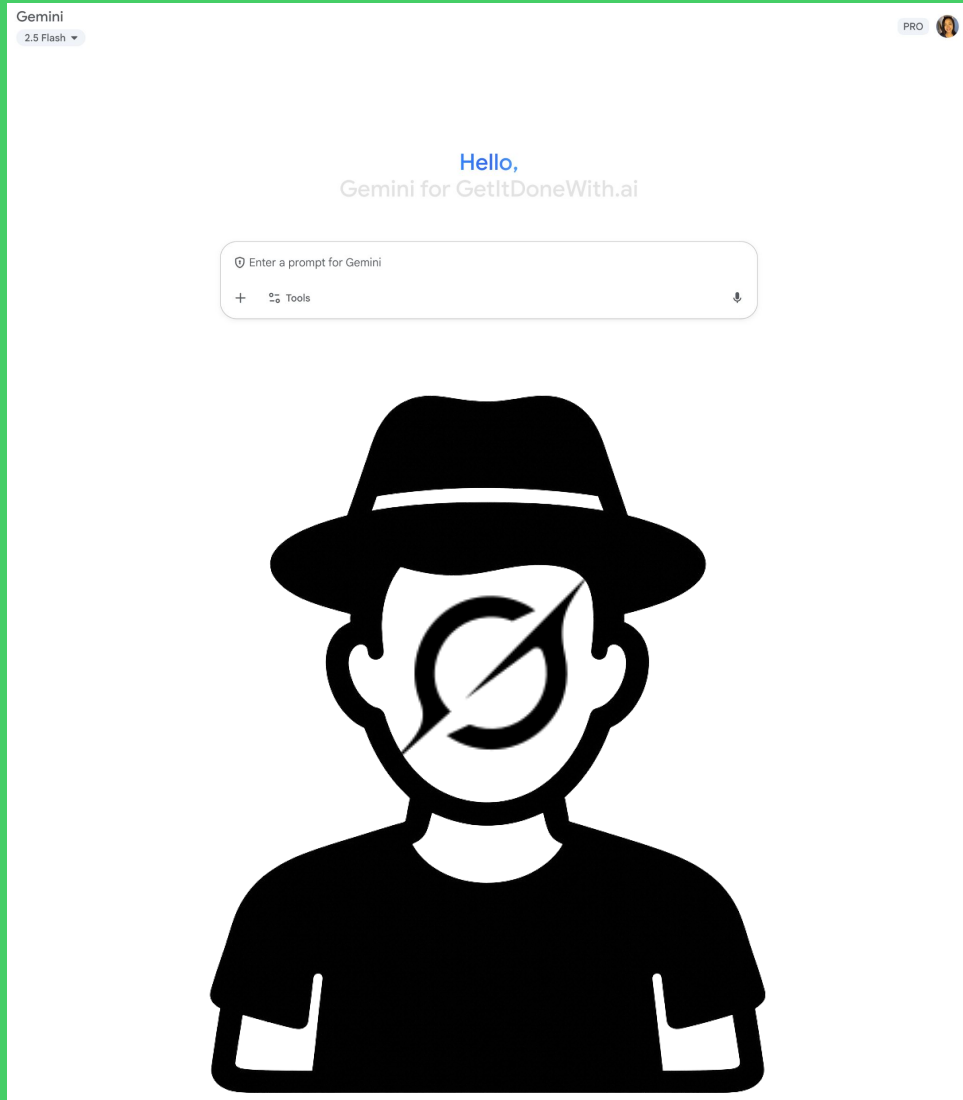

Research, productivity tasks, image generation

Not Recommended For:

Casual chat about non-business contents

GetItDoneWith.AI Describes 2.5 Flash As:

Best business assistant who keep you focused on task executions

Characteristics (Grok 3)

Blunt, witty, real-time focused, unfiltered

Best For:

Humor, news insights, entertainment, large context processing, coding

Not Recommended For:

Content generation with moderation requirement, processing of highly confidential data

GetItDoneWith.AI Describes Grok 3 As:

Social media king (as it's trained with X (ex-Twitter) data) who can boost your creativity without any limitations

Pricing Comparison

AI Chat Tool Pricing Table

Free

- Limited GPT-4o / o3
- Voice mode
- File uploads

- Limited text generation
- Websearch
- Upload texts and images

- Limited text generation
- Websearch

- Limited Grok 3
- Limited image generation
- Projects, tasks, voice features
- Limited memory

Paid

Plus Plan: \$20/mo

- Newer models
- Agent access
- Deep Research

Pro Plan: \$20/mo

- Newer models
- Connect to Google Workspace
- Deep Research
- Claude Code

AI Pro: \$19.99/mo

- Notebook kLM
- veo3 (Image generation)
- Jules (coding agent)

Super Grok: \$30/mo

- Image generation
- More space
- Priority voice
- Newer model access

Pro Plan: \$200/mo

- Sora movie generation
- Codex agent
- Advanced voice model access

Max Plan: \$100/mo

- More storage
- Priority traffic
- Higher output limits

AI Ultra: \$249.99/mo

- YouTube premium
- More storage
- Flow (video making)

Super Grok Heavy: \$300/mo

- Priority access to new features
- Newest model access

Tips When Choosing AI Chat Tools

1. Have 1 tool that you use frequently, and use others as back-ups
2. Start with a free account, pay only when you pick up the habit of using it frequently
3. Make sure to adjust the privacy settings, and share personal informations at your own risk
4. Don't switch often - conversation memory comes in handy (they more they know you the better)

Final Thought

Just like each of your friend has different characteristics, AI tools have characters and traits, too. They are subtle, but it makes a difference overtime.

Having said that, don't spend too much time evaluating the differences in models, unless learning about them is your hobby lol. Knowing the differences between GPT o3 and o4-mini may not save your day - better to use that time to get something done. I don't think knowing about new models matter much, if your main job is not about AI.

Pick one, try, and enjoy the "conversations" with AI - that's how you get things done.

What's Next

You chose an AI tool to work with - that's great. Stick to it, and practice using them everyday.

If you haven't learned to pick up the habit of chatting with an AI tool, [read this](#), you may feel more ready than before.

Do you have your favorite AI tool and been using it for a while, but you feel like it's not enough?, [Book a free call](#) or [send us a message](#) and we'll jump right into getting things done!
