AI 101

The Absolute-Must-Knows of AI

Time to read:
3 minutes

Your superpower after reading this:
AI doesn't feel that complicated

Before you get better with AI, you need to get calmer with it

Hello, I'm Aska, your friendly neighbor who knows a bit about AI.

I used to read lots of books, articles, and refer to different sources until I felt confident drawing conclusions. That's how I studied when I went to the grad school 15 years ago, and that's how I started studying about AI in the last few years.

And the results were **terrible**. The feeling of **exhaust. FOMO. The imposter syndrome** - you name it. I was always overwhelmed by the speed of the progress in AI technology, and the volume of information. I didn't feel ready to implement anything, because I wasn't sure if I were doing it right, using the right thing. Then everyone said different things - which confused me even more.

I needed a better structure. A different mindset. A different mechanism to learn.

And I found them. I now feel **calm, ready, enough**.

I wanted to help others to feel the same, so I started this platform, **GetItDoneWith.AI**.

Ready to take a different approach than the traditional learning method?

(I promise this is the page with the longest texts. It only gets easy.)

Why It's Important to Understand AI Before You Start Using It

Don't skip even if you know already!

**AI won't make you smarter *unless*
you know how to use it well.**

Not yet backed by data, but hopefully soon.

But I've seen so many people using AI wrongly, resulting in

- Wasting money
- Wasting time
- Loss of opportunity (people who know what AI is, will definitely replace people who don't know)

Generative AI Explained to 10-Year-Olds

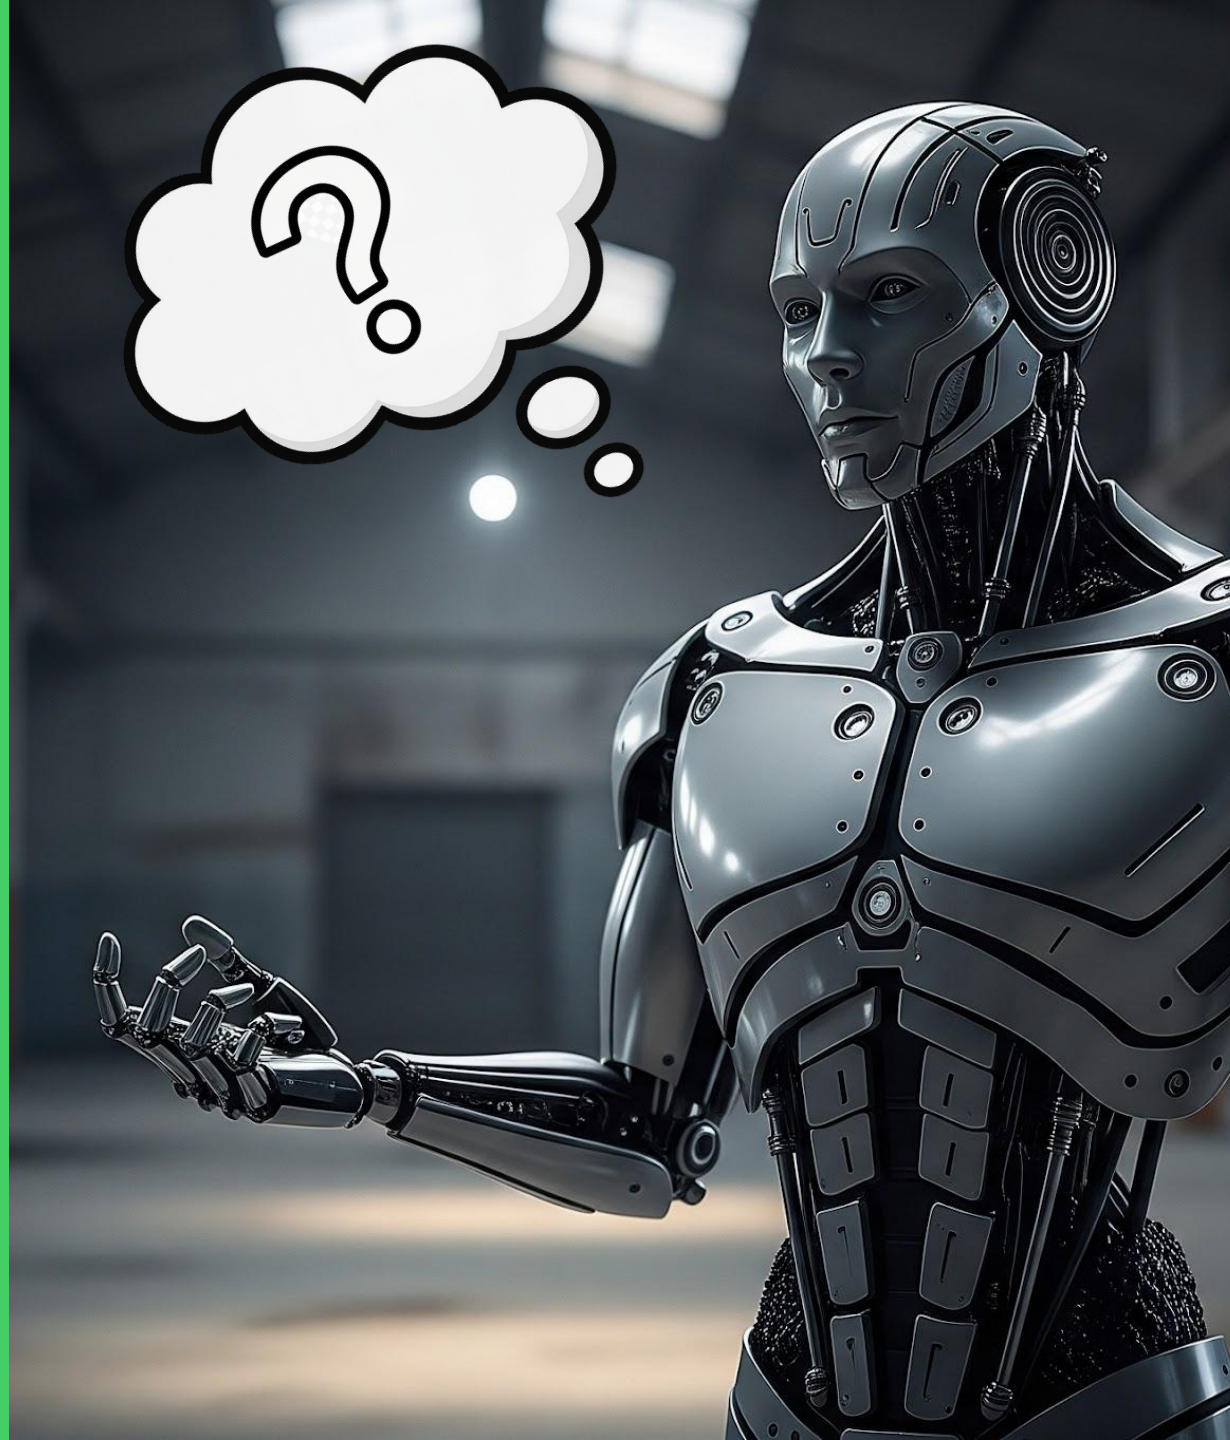

Not because I think you have a brain of a 10-year-old...

1. AI **doesn't think**. It guesses.
Really, really fast.

I gave some treat to the dog.
The dog happily [] them.

I [] to school this morning,
and completed my exam.

Can you guess what are the most likely word that fits in
each box?

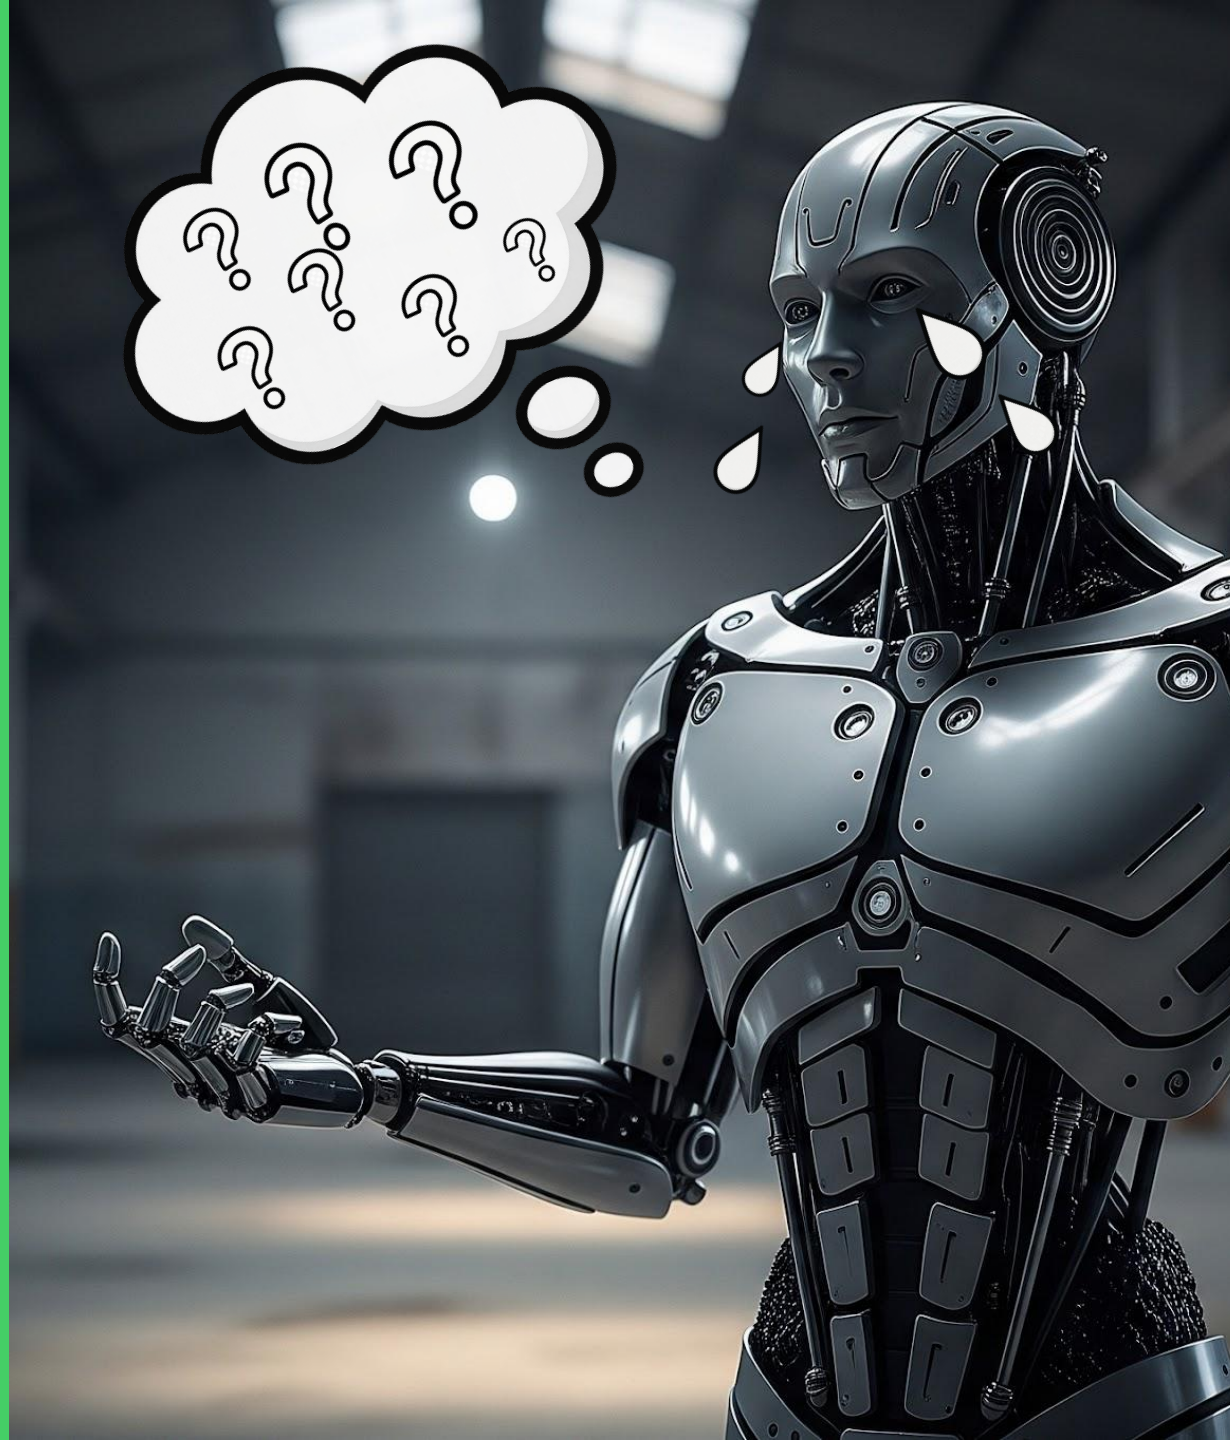

2. AI **will never be** 100% accurate, especially when you give little context.

Turn [] after the signal.

Tonight I'm going to meet [].

This is why you need to give AI *context*. Without it, it's just guessing.

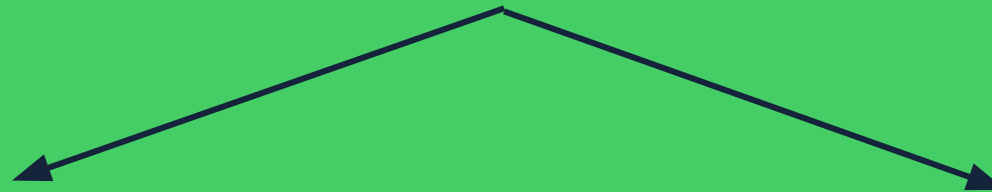

It's like a friend who always finishes your sentences.

Sometimes they're spot on, and sometimes...completely wrong!

3. AI **mimics human**, because they are trained on a huge amount of data made by human, about human.

Human: I got into a car accident today and injured my leg.

AI: I'm sorry to hear!

Do you want to talk about the weather?

Can you tell the difference between saying it because that's the right thing to say, and saying it because you really feel sorry?

Can AI think? NO

It guesses, it doesn't think.

Can AI feel? NO

It can write or say emotions, but it doesn't have them.

Can AI help with tasks? YES

When you guide it well.

You don't need to become an expert - but if you **learn now**, you'll benefit a lot from it.

MINDSET + AI

ACTIONS + AI

10x RESULTS

The fundamentals of success haven't changed. AI will just make them 10x faster.

Coming Soon...

MINDSET + AI

Tips to **shift your mindset** to confidently leverage AI for personal and professional growth, moving past overwhelm and imposter syndrome.

Examples of how AI has helped individuals to **think differently**, or **overcome challenges**

ACTIONS + AI

Step-by-step guides for using different AI-powered products in specific use cases, demonstrating which ones deliver results (and which ones might not be worth your time or money).

Quick, actionable how-tos that help you use AI in under 10 minutes - for emails, planning, content, and everyday decisions.

What's Next

This guide is just the first 1%.
If you're serious about saving
time, cutting costs, or growing
your business with AI - book a
call, or just email us.
We'll show you what's actually
worth learning, and what to
ignore.
